

ROI on Day One.
Not too good to
be true.

RaaS. Only pay for productivity.

What is RaaS? It's a monthly subscription for the automation services our inVia Picker robots provide. You don't pay for costly equipment and total cost of ownership burdens that come with it. That means you start seeing a return on your investment the day you start using our services.

It also means your system is designed to meet your unique fulfillment needs. We build in adaptability and flexibility to accommodate order volume spikes - the ones you forecast and the unexpected ones.

When you're ready to expand, it's easy to scale. We design it with the horsepower your distribution center needs today and the ability to add capacity as your business grows. You don't have to tie up investment capital in a system that will be ready for where you *think* you'll be tomorrow.

What is RaaS not? RaaS is not a lease that just spreads an equipment purchase across 36 months. Your RaaS payments go directly to productivity in your warehouse.

inVia's Turnkey Automation Solution

INVIA LOGIC
AI-Driven Software

INVIA PICKMATE
Simple Mobile Tools

INVIA PICKER
Robotic Automation

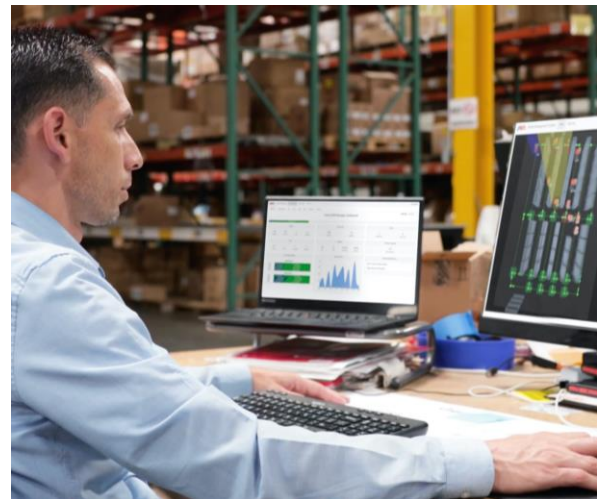

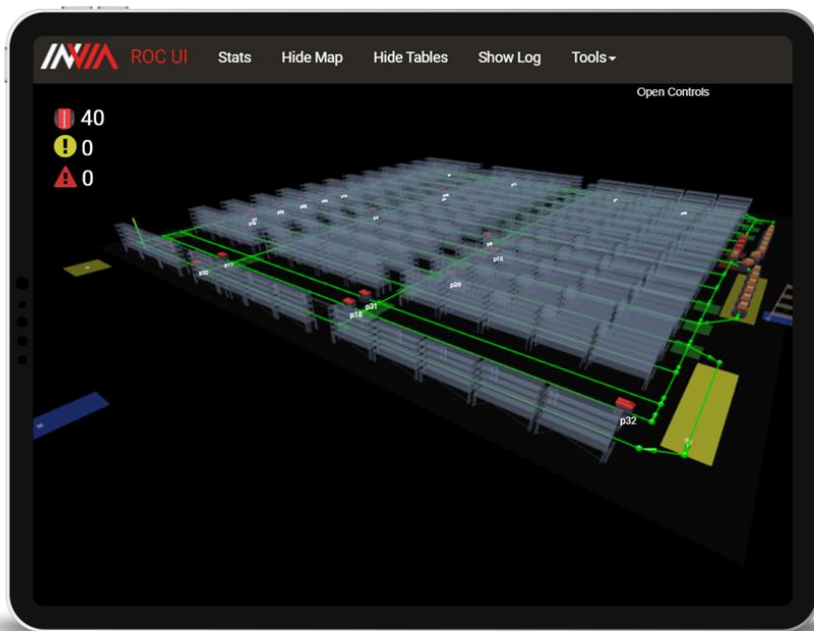

ROC
Remote Operations

Our subscription-based system isn't just hardware, software, or remote oversight. It's all of the above, working together seamlessly to optimize your operations. Nimble robots, powerful AI-driven optimization software, and 24/7 proactive monitoring all dramatically increase productivity.

inVia's RaaS model includes:

- **Pay for productivity** - Monthly subscription for services provided by inVia Picker robots to move materials across the warehouse, including picking, replenishment & putaway, cycle counting, putback and returns, and more.
- **24/7 monitoring and support** - Our Robotics Operations Center (ROC) is an extension of your operations team, remotely monitoring your robotics system and identifying issues before they become problems.
- **Technology updates** - Our system uses AI and machine learning to identify and automatically implement new optimizations to your fulfillment process and ensure you always benefit from the latest technology.
- **Maintenance and redundancy** - Your system comes with full equipment maintenance services and replacement if needed.
- **Scalability and adaptability** - We can make modifications to your system and your fleet in just a matter of days to support spikes in demand and changes in order profiles.
- **Mobility** - Our inVia Picker robots are compact and durable and can easily be crated up and shipped to other locations in your distribution network.
- **Intelligent software and systems expertise** - Our technology is built by a team of network systems and software development engineers who are experts in delivering software-as-a-service (SaaS).
