# Gain 2-3x productivity boost with inVia's software-directed picking!

inVia Logic warehouse automation software optimizes order picking, guiding warehouse workers to quickly and accurately pick and place goods. This AI-powered Warehouse Execution System (WES) orchestrates tasks across the entire warehouse to minimize idle time, maximize productivity and improve pick accuracy.

Pick faster with Pick-to-Color technology

Cut warehouse walking by 50%

Boost team productivity and reduce idle time

Our software constantly orchestrates all fulfillment workflows to maximize your most precious commodity – time. We're making sure it's never idle.

# Ensure the highest picking efficiency in your warehouse

## Meet your daily SLAs

inVia Logic evaluates your daily SLAs and builds a plan prioritizing and coordinating every task to ensure you meet your deadlines without disruptions.

## Keep your team productive at all times

Our AI-powered software intelligently orchestrates tasks across the entire warehouse and dynamically assigns and directs workers so that your team is never idle.

## Intelligent picking strategies

inVia Logic intelligently groups orders into different job types to reduce moves and scans ensuring highest picking efficiency.

## Pick-to-Color technology

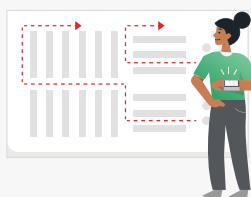

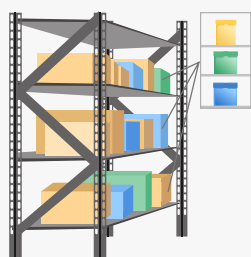

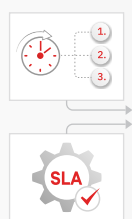

inVia PickMate productivity app uses a simple intuitive color-based interface. It directs employees with step-by-step instructions and requires just minutes of training.

## Reduce warehouse walking

Smart algorithms reduce warehouse walking by 50% with system-directed cluster picking and guiding your team along the most efficient paths.

## Make better decisions with actionable data

Our business intelligence dashboards offer easy access to real-time data on order status and daily fulfillment progress, as well as labor performance and inventory control.

### Dynamic Order Allocation

inVia Logic WES software dynamically allocates orders and assigns tasks to achieve daily SLA goals.

### Intelligent Picking Strategies

Intelligent picking strategies group orders into different job types to reduce distance and increase hits per pick.

### Path Planning

inVia SmartPath identifies the shortest paths and reroutes pickers to avoid congestion. Dynamic cluster picking eliminates trips to the same aisle.

### Pick-to-Color

inVia PickMate guides workers with simple pick-to-color instructions.

### Maximize Picking Complete Orders

inVia Logic routes each job to the correct inventory zone, maximizing orders that can be picked complete from each zone.
