

More than Just Support. We're Your Operations Partner.

Most support service providers are committed to responding when a customer surfaces a problem. We believe that's too late.

Our Robotics Operation Center (ROC) team of warehouse automation experts is monitoring your operations 24/7 to identify potential issues before they turn into problems. It's core to our Robotics-as-a-Service (RaaS) model, where you pay only for the services provided by the robots that we own and operate.

inVia's Turnkey Automation Solution

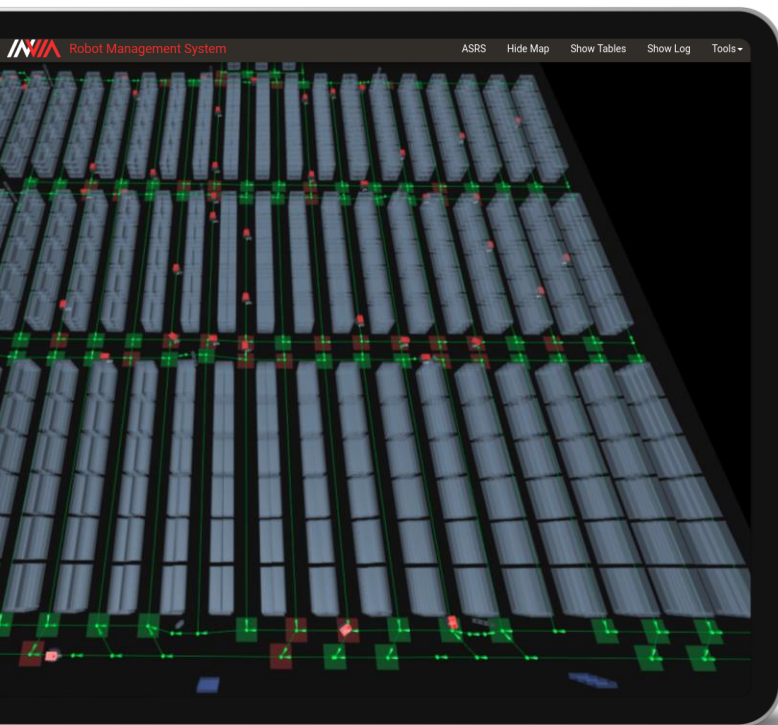

Our subscription-based system isn't just hardware, software, or remote oversight. It's all of the above, working together seamlessly to optimize your operations. Nimble robots, powerful AI-driven optimization software, and 24/7 proactive monitoring all dramatically increase productivity.

inVia's ROC support includes:

- **Live warehouse simulations** - Full visibility into fulfillment operations with the ability to remotely operate robots in real-time.
- **Remote deployment** - Robot fleets can be shipped & deployed, software integrated, and the system turned up, all through our remote ROC.
- **No burden of equipment ownership** - You pay only for services delivered; we own, operate, and optimize the robots.
- **Your extended team** - Have access to robotics expertise without the cost of hiring, training, and retaining your own full-time experts.
- **Business intelligence** - Our ROC team monitors system efficiency through dashboards that report real-time fulfillment progress at the warehouse level, as well as detailed views into order status down to the order line level.
- **Remote labor management** - Our ROC team monitors labor efficiency through real-time worker location and productivity data.
